ASE Task 1

Create Project In Spring Boot

Add dependincies

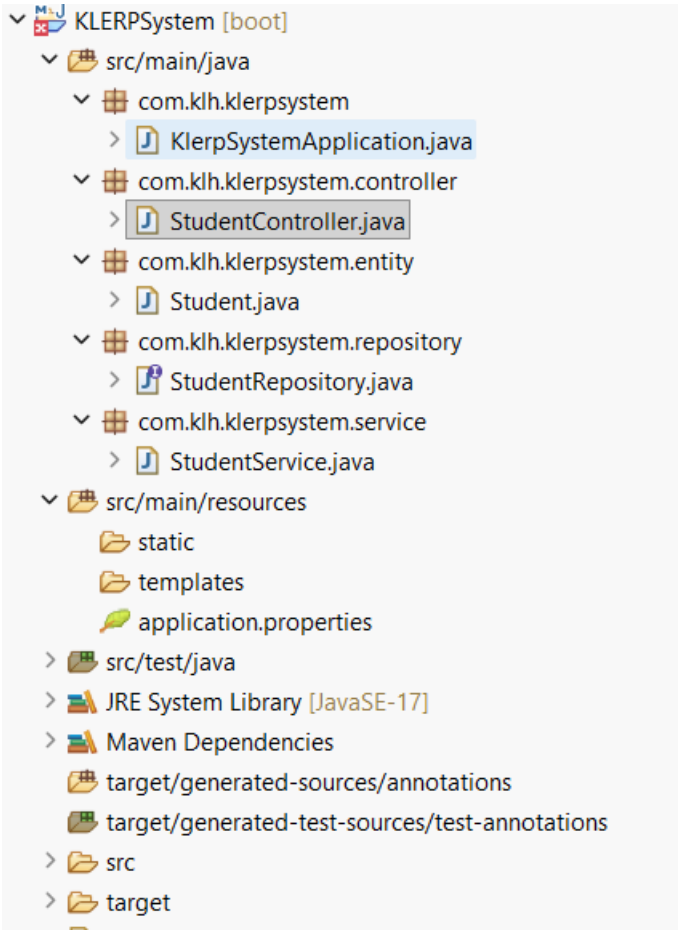

Open My Sql and create kl_erp Database

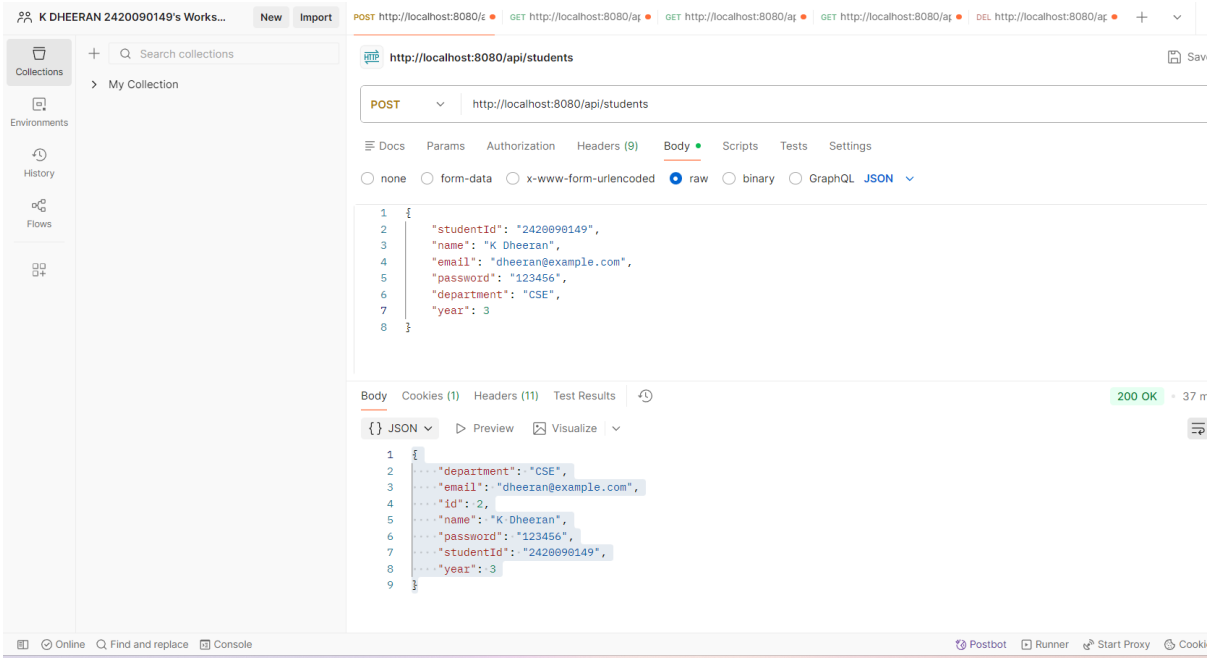

Result Grid | Filter Rows:

Database
bankdb1
coursedb
information_schema
kl_erp
mysql
performance_schema
product_db
registrationdb
sys
trainingdb1

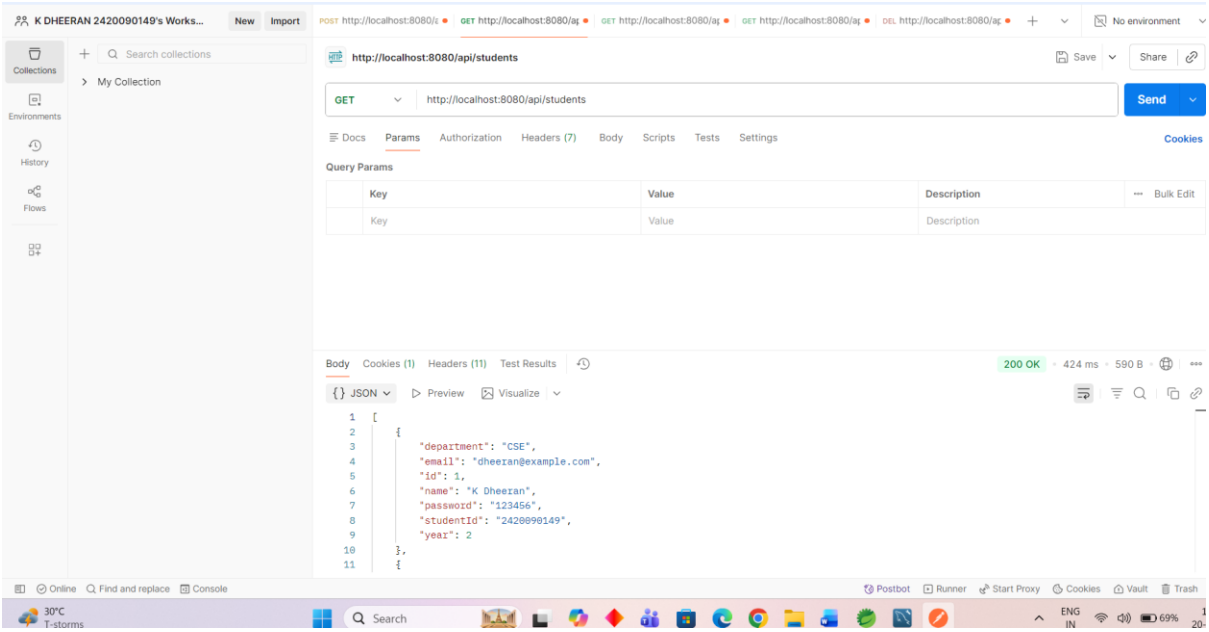

Create The Project Structure and Upload Codes Accordingly

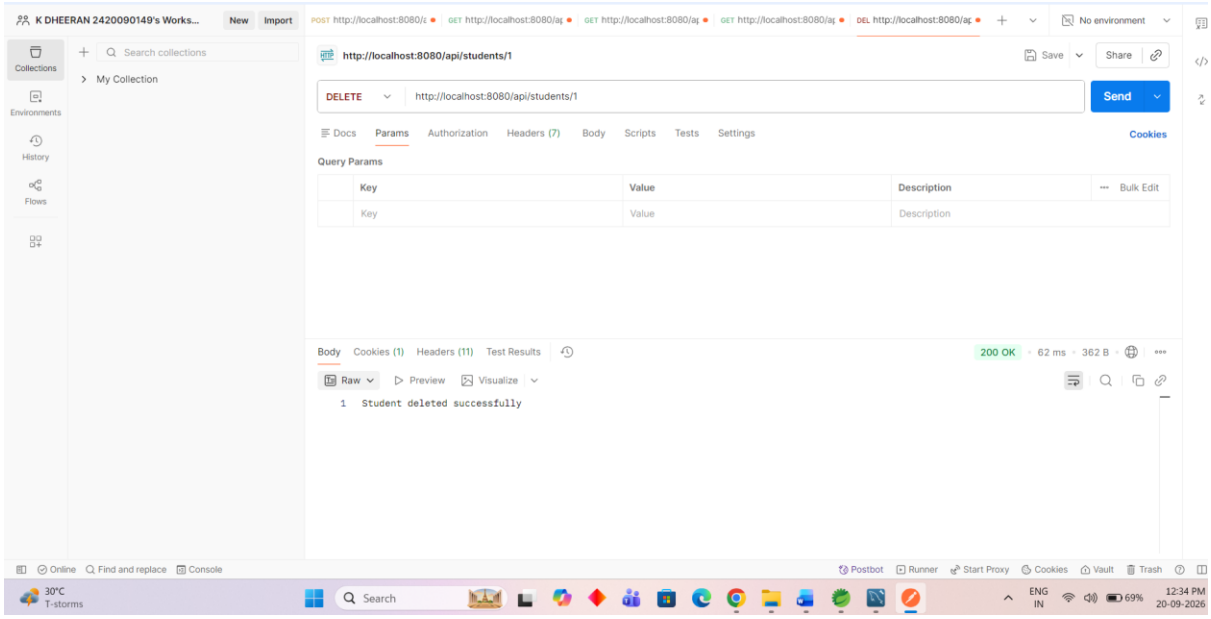

Run The Project and Test Using Postman

Next use get method to get the student details

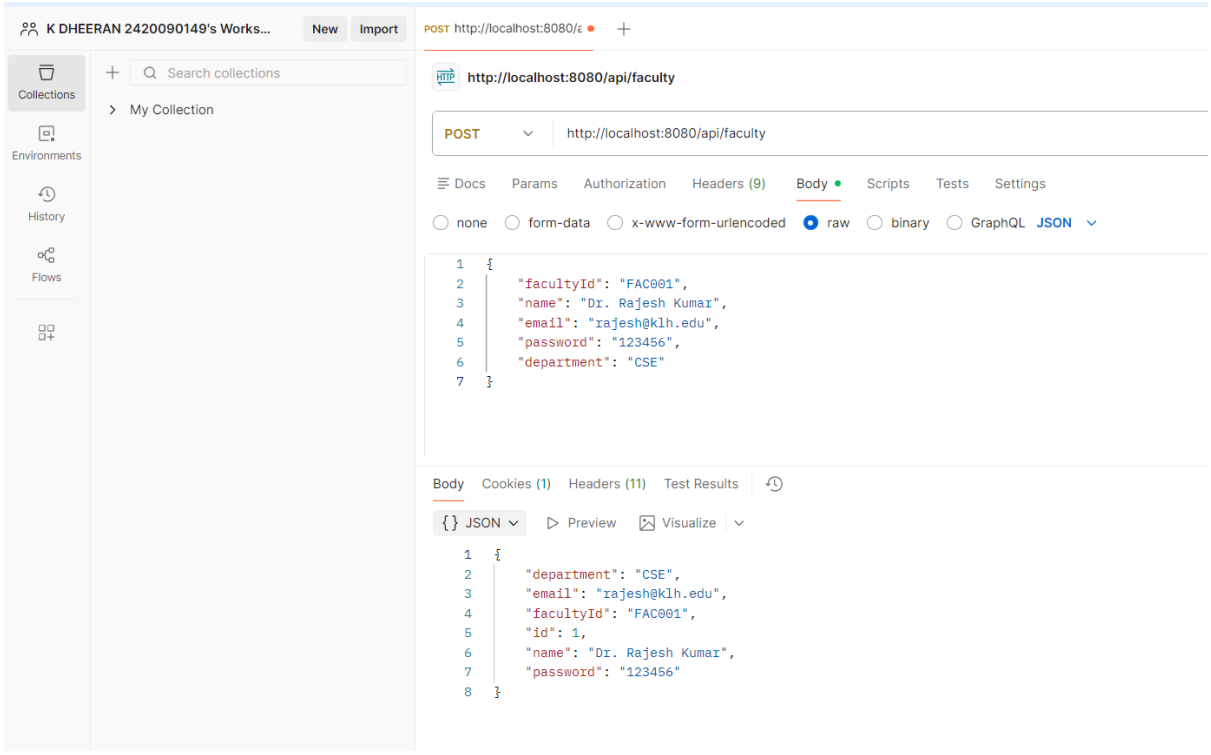

Use Delete Method

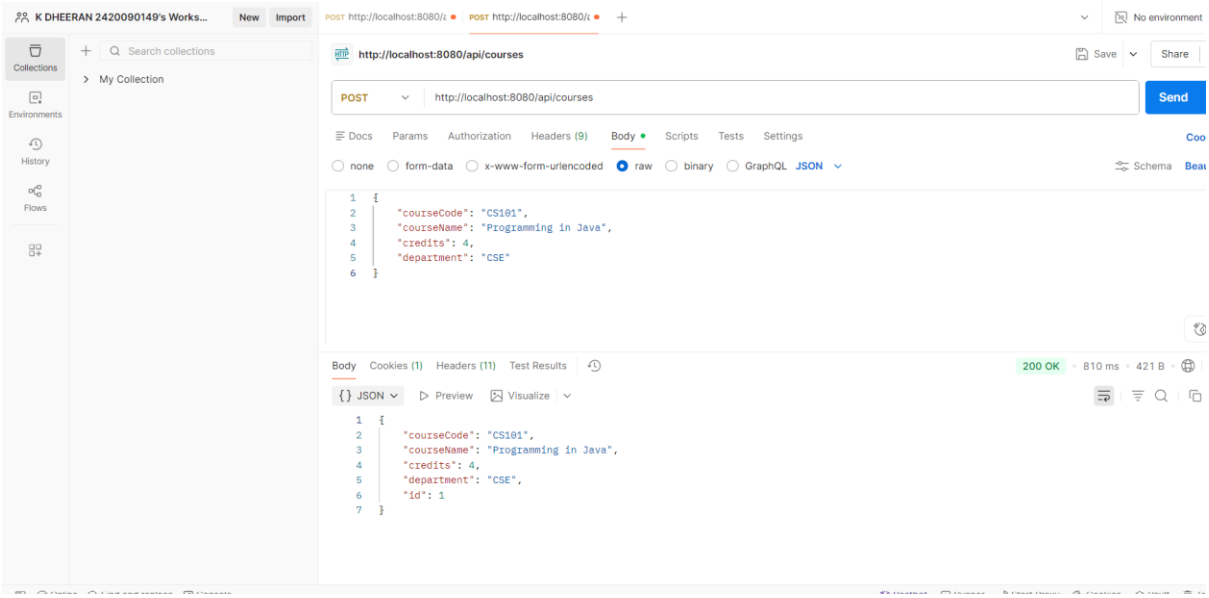

Add Faculty file and update spring project

Use Postman And send post

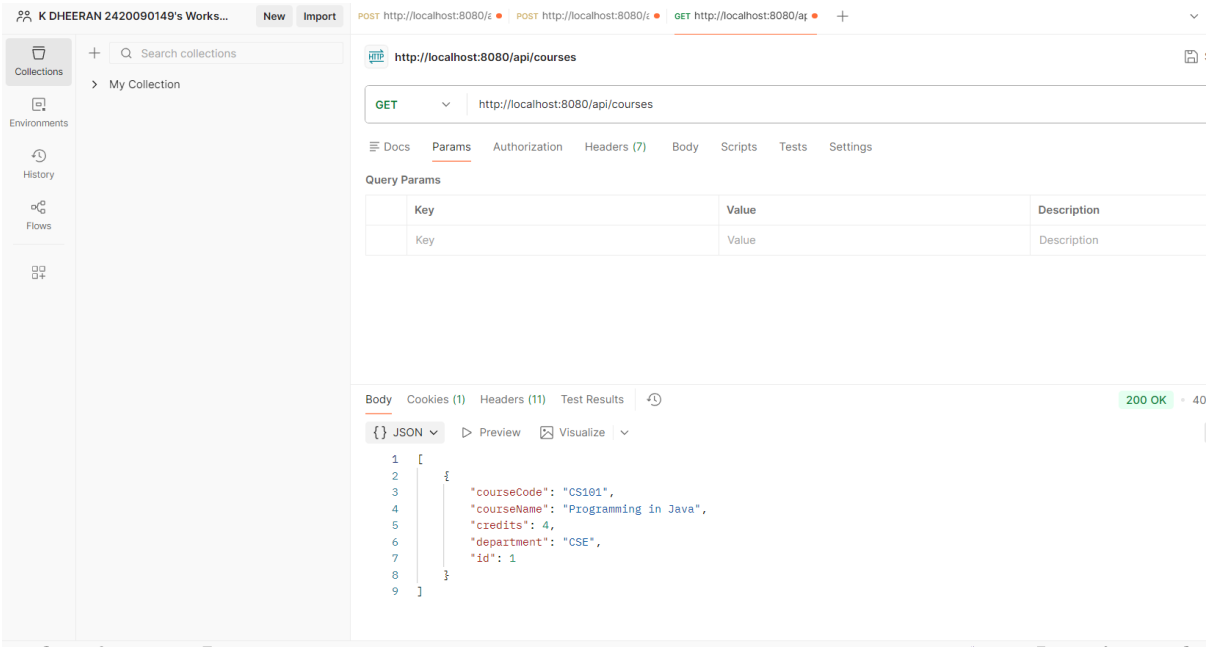

Add Courses Files in Spring and Update -> Restart After Updating

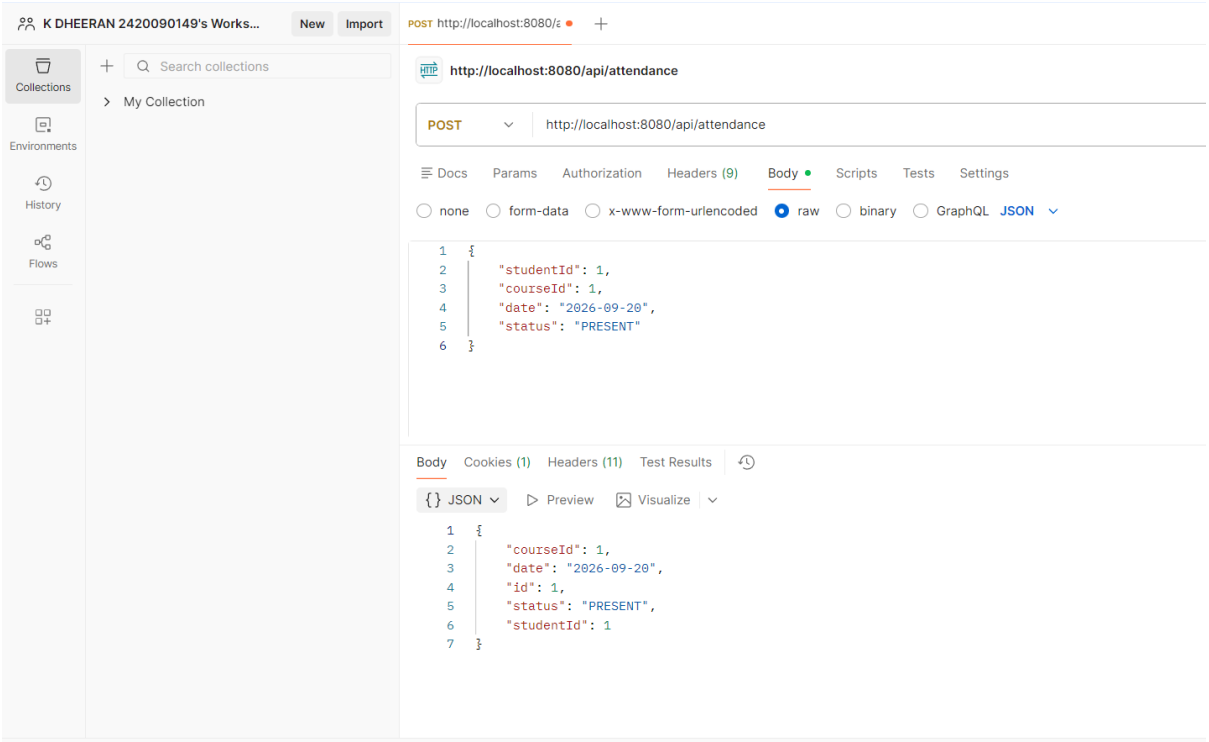

Test In Postman the endpoint Courses

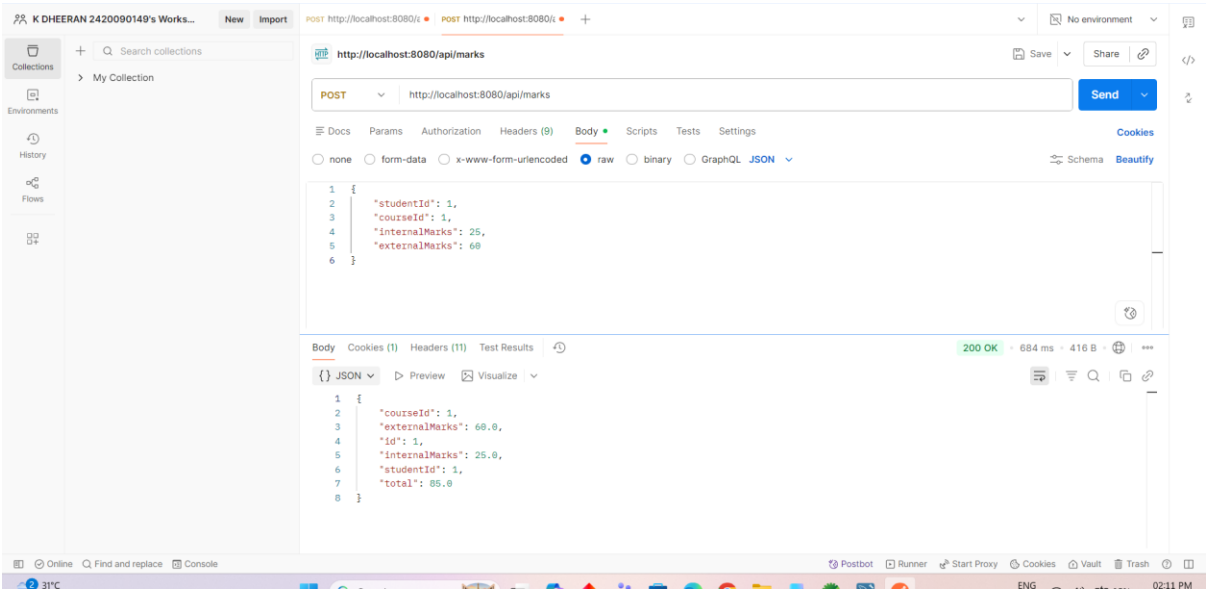

Use Get To get Courses

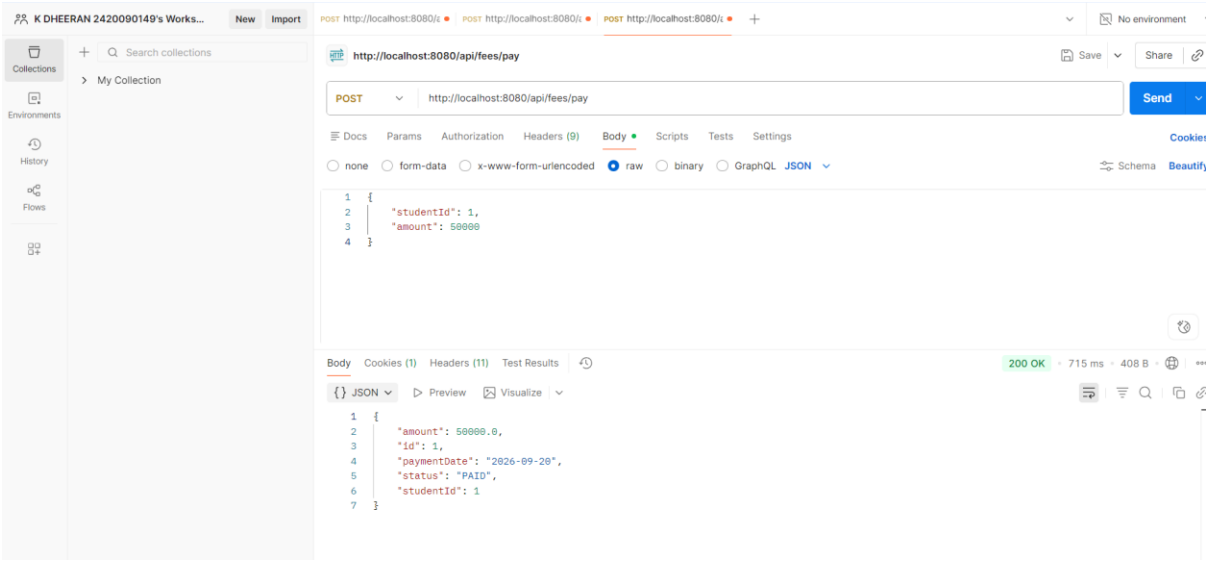

Add Attendence and restart as spring boot app and test as end-point

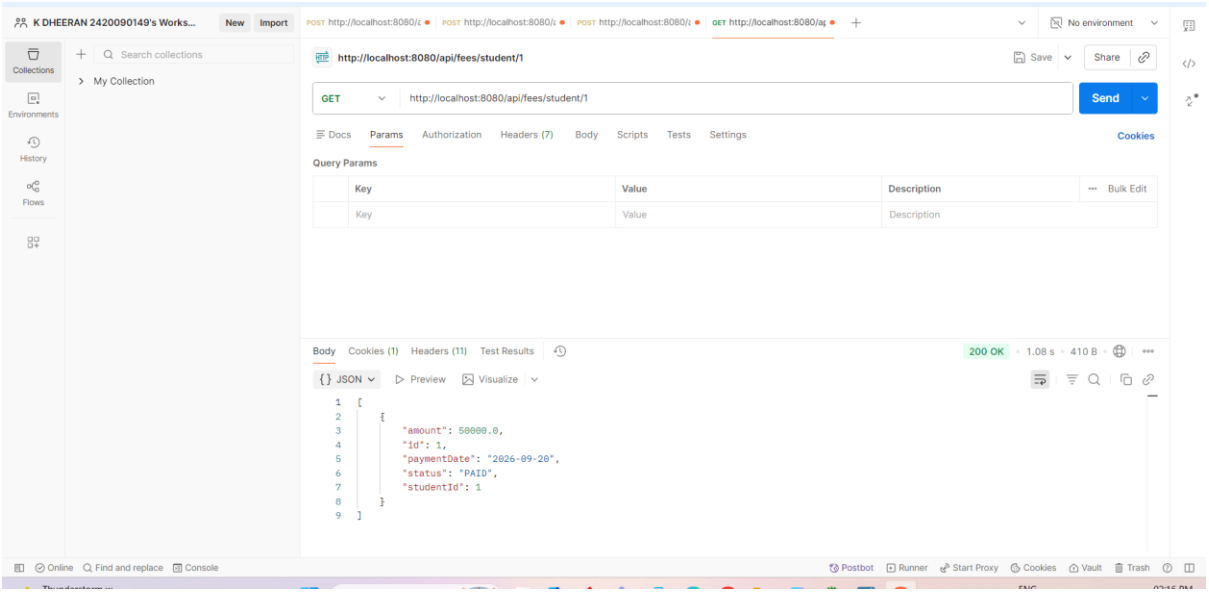

Add Marks and Update the Spring And Restart

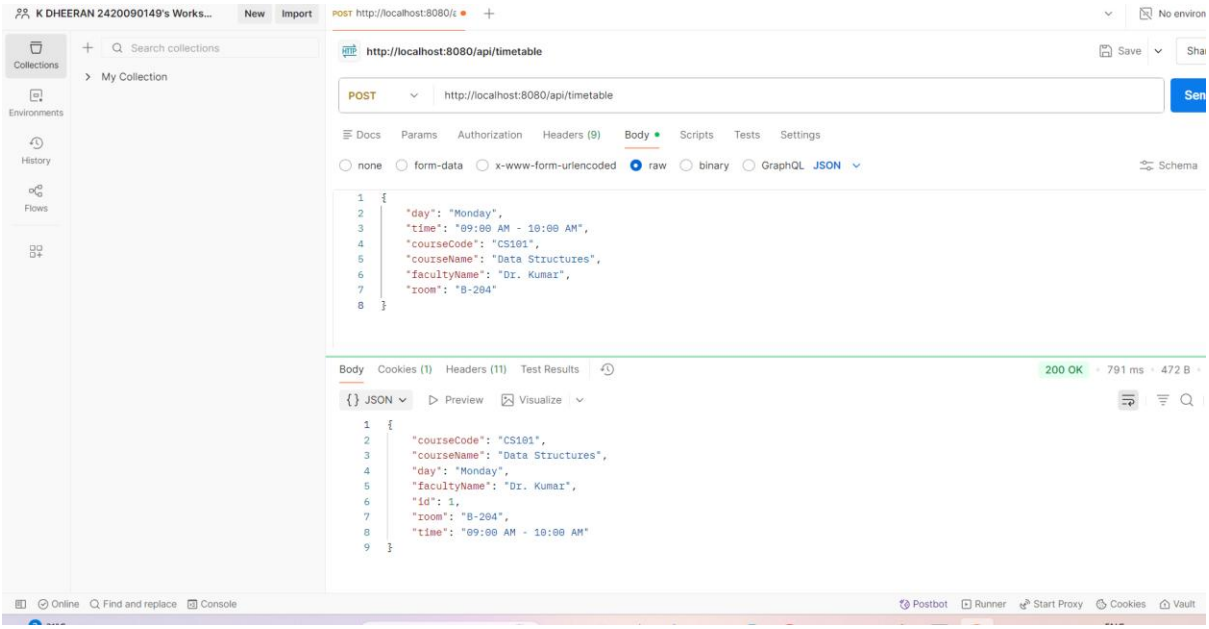

Add fees and Restart

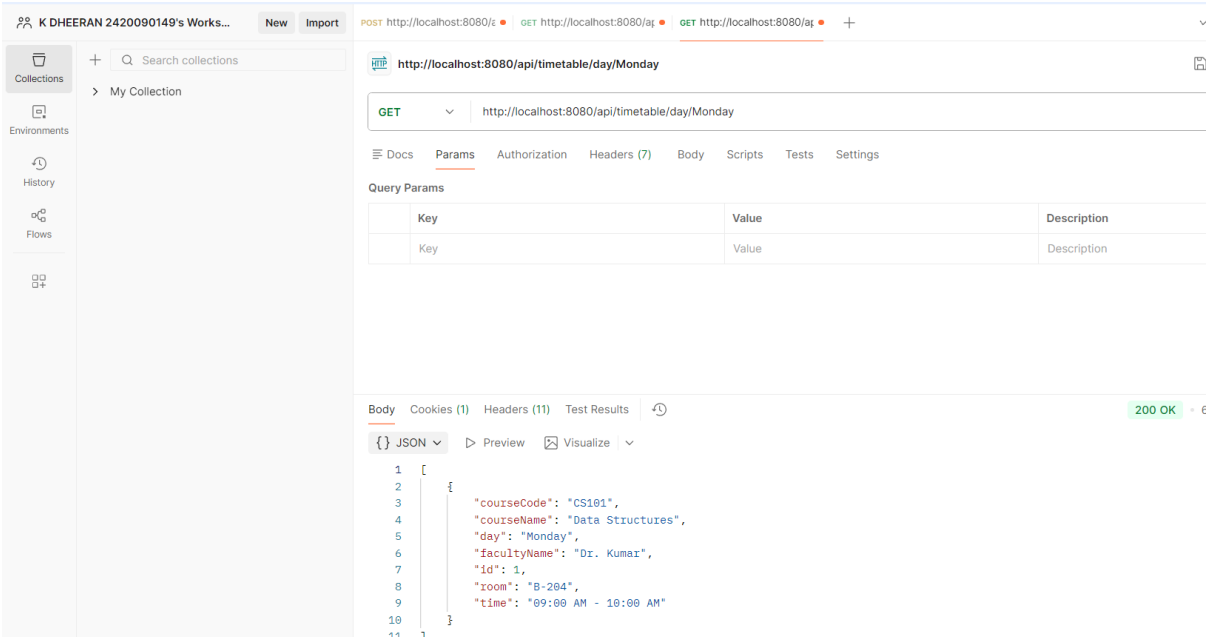

Add Get Method

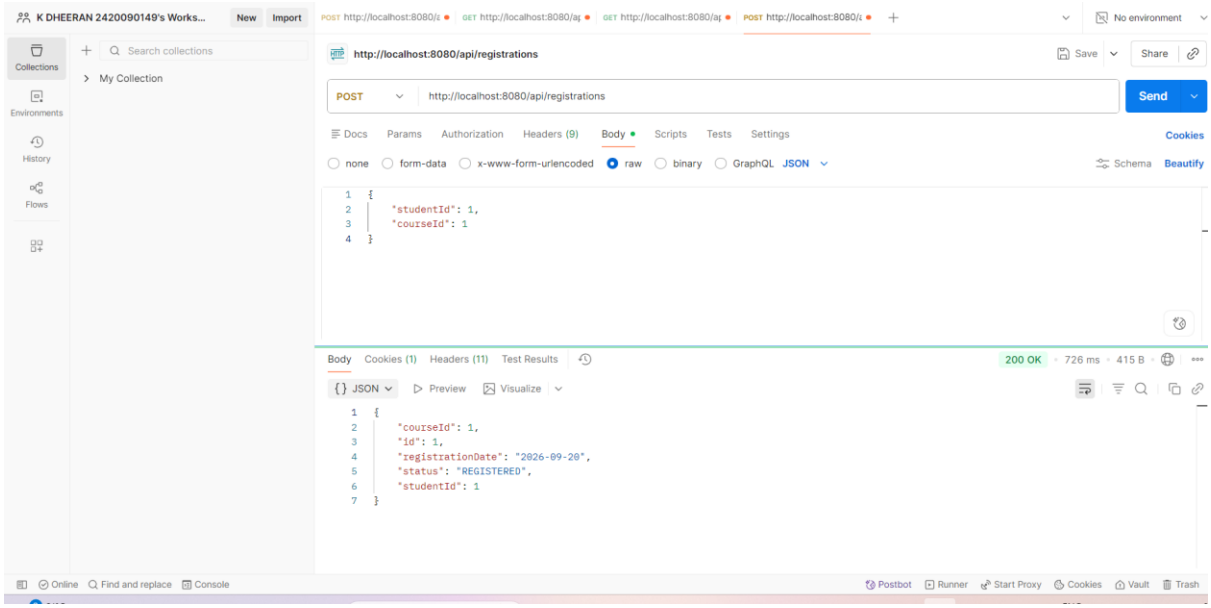

Add Time Table And Update And restart -> Test In Postman

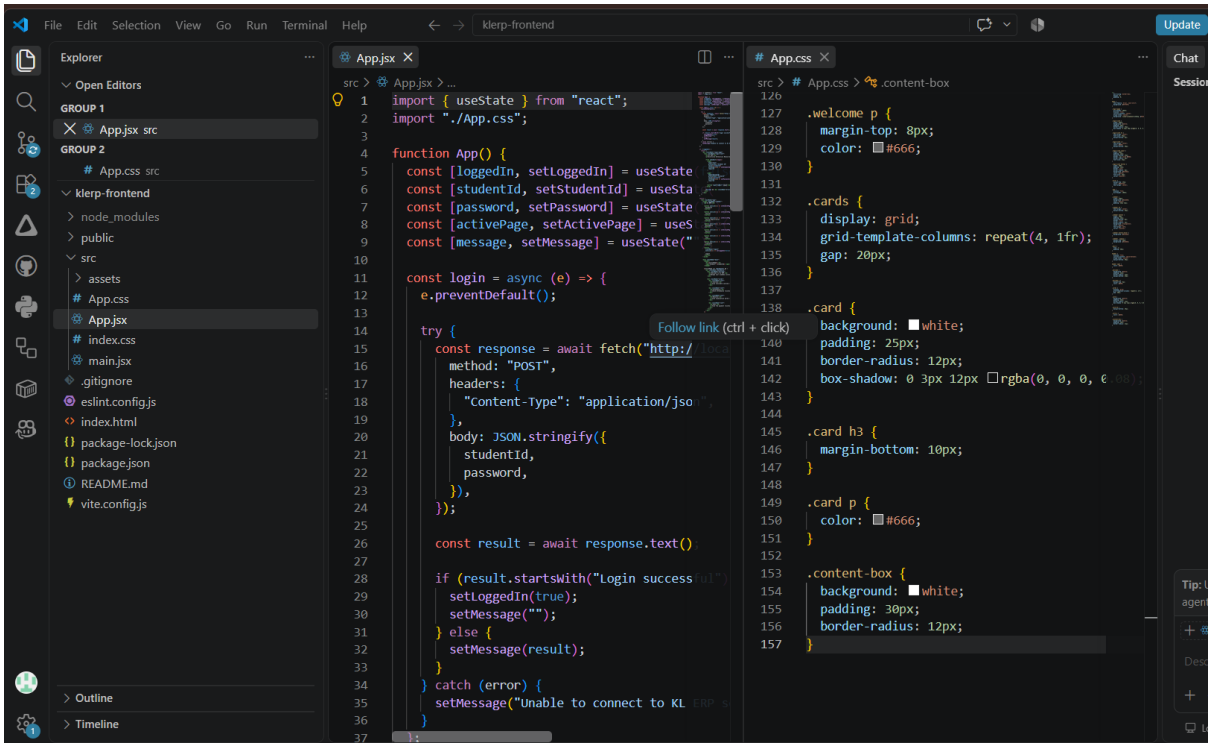

Edit End Point And Get Monday Time Table

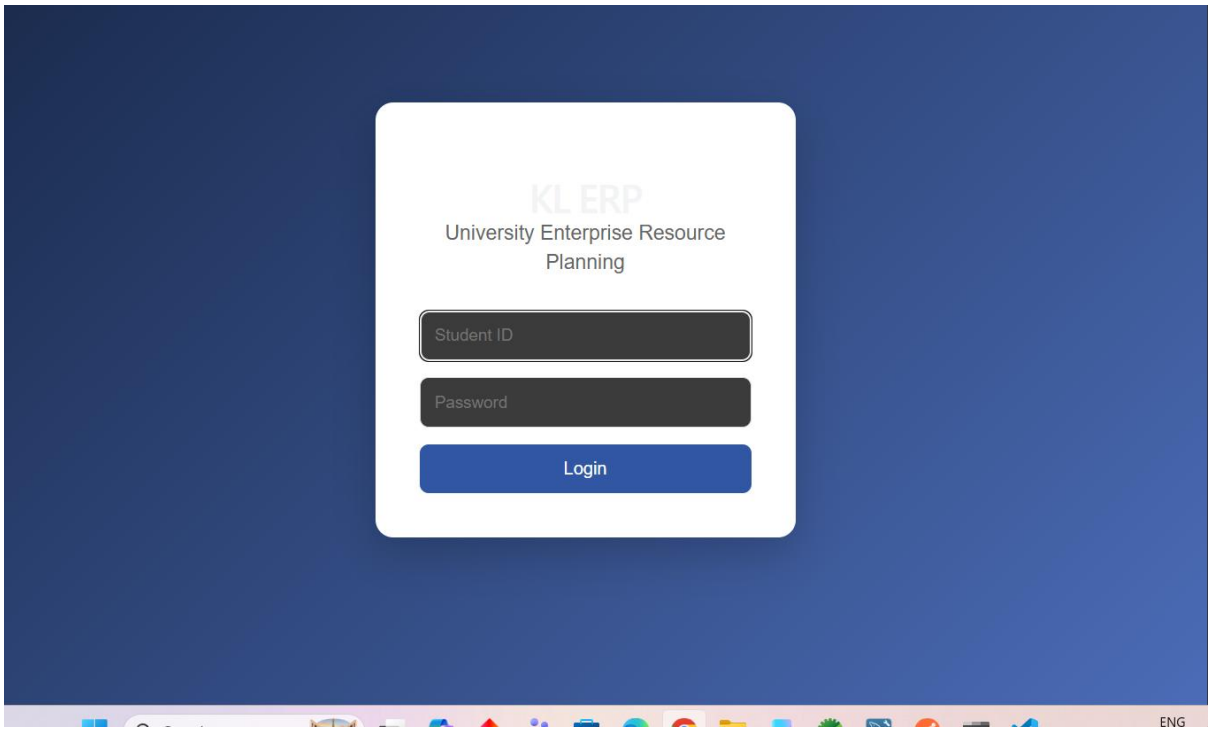

Add Registrations and test in postman

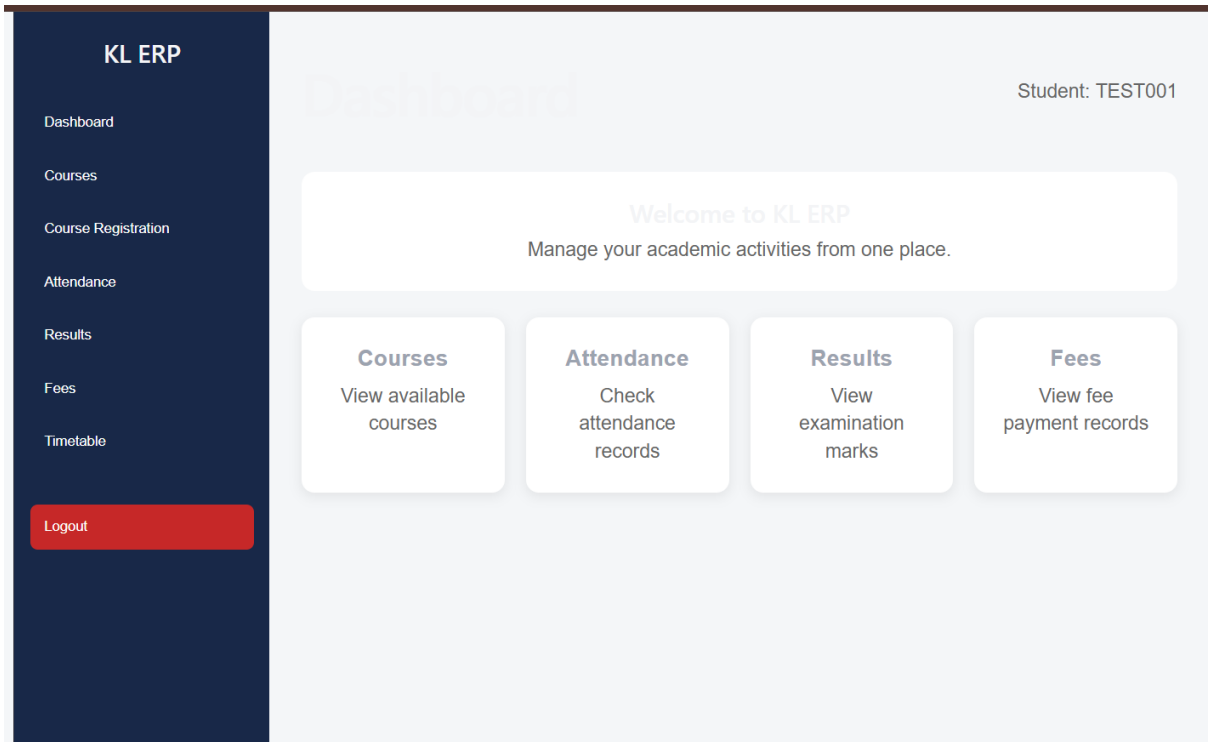

Create the Vite Folder in Vs and Update app, css &jsx codes

Run the app

Enter id-TEST001
Pass-123456

Explore the options

The Data is Being Displayed Meaning that the backend is working in sync with front end.

Project Summary

1. The KL ERP System provides an integrated platform for managing student, faculty, academic, and administrative activities.
2. The system includes modules for course registration, attendance, examinations, fee management, and timetables.
3. It is developed using **Spring Boot, Java, MySQL, and React.js** for a scalable and user-friendly architecture.
4. Secure student authentication and REST APIs enable efficient communication between the frontend, backend, and database.
5. The system improves academic management by centralizing information and simplifying routine university operations.
